Summary

Backend Developer (Java, Spring Boot) with frontend integration skills (React, TypeScript). Build secure and scalable ecosystems using cloud-native architectures (AWS, Docker) and advanced authentication (Keycloak, OAuth 2.0), consistently prioritizing robust and optimized solutions.

Skills

Technical Skills: Java, Spring Boot, SQL (MySQL, PostgreSQL), Microservices, Linux, JWT, OAuth 2.0, Keycloak, Docker, CI/CD, AWS S3, RESTful APIs, React, TypeScript, Git, GitHub, WebSockets, Postman, Swagger, SCRUM

Soft Skills: Effective Communication, Teamwork, Problem-Solving, Adaptability, Critical Thinking, Organization, Proactivity

Languages: Spanish (Native), English (Intermediate)

Experience

Full-Stack Developer, Hey! Cha – Remote

Dec 2024 – Jan 2026

Architected and deployed a secure, multi-user POS platform to digitize and streamline end-to-end retail operations, inventory, and logistics.

- Engineered a high-performance REST API using Spring Boot (Java 17), implementing OAuth 2.0 and JWT for robust Role-Based Access Control (RBAC).
- Built responsive user interfaces with React and TypeScript, integrating AWS S3 for efficient asset storage management.
- Implemented a real-time notification system to instantly alert users about new sales and order status updates.
- Configured automated database backups to ensure data integrity and reliable disaster recovery.

Projects

Full-Stack Patient App – Enterprise Edition

Sept 2025 – Nov 2025

Cloud-native microservices platform for comprehensive patient and appointment management.

- Architected a scalable microservices ecosystem using Spring Boot and Spring Cloud, separating concerns into Patient, Doctor, and Appointment services.
- Engineered an event-driven Notification Service leveraging Apache Kafka to orchestrate asynchronous email alerts and appointment reminders.
- Integrated Zipkin for distributed tracing and MySQL/MongoDB for polyglot persistence.
- Secured all API endpoints via OAuth 2.0 and JWT gateways for robust authentication.

E-Commerce API – Enterprise Edition

June 2025 – July 2025

High-performance backend for a scalable e-commerce solution.

- Developed a modular microservices architecture with Spring Boot, utilizing Apache Kafka for asynchronous messaging and high-throughput order processing.
- Integrated Keycloak to manage centralized identity and access control (IAM), ensuring secure authorization flows.
- Optimized data storage by implementing a hybrid strategy with PostgreSQL and MongoDB.

Full-Stack WhatsApp Clone

Feb 2025 – Mar 2025

Real-time web messaging platform.

- Built a full-stack real-time messaging application (React/Spring Boot) replicating WhatsApp Web core features.
- Implemented low-latency, bidirectional chat for concurrent users utilizing WebSockets.

Education

Universidad Nacional Autónoma de Nicaragua (UNAN-LEÓN), Bachelor's Degree in Ingeniería en Sistemas de Información – León, Nicaragua

2021 – 2025

Oracle Next Education G5, Certification in Back-End Development with Java and Spring Boot – Alura Latam (Remote)

Apr 2023 – Oct 2023

Platzi, Certification in Front-end and Back-end with JavaScript for Web Development – Remote

Mar 2023 – July 2023
